

## Routine Assessment Appliance by InfoSight™

Proactively and automatically test for Information System compliance and security using a single appliance.

Information technology and security professionals are drowning in data regarding security and compliance. Resources are limited and devices and applications that are required to protect organizations are difficult to manage without automation. In spite of on-going complexity, an organization must meet serious regulatory requirements and fiduciary responsibilities.

Why not use a proven and effective proactive security appliance that has multiple features built within one appliance? The Routine Assessment Appliance combines asset database information, policy monitoring, vulnerability information, and compliance surveys to determine if an organization is meeting regulatory and compliance standards.

The Routine Assessment Appliance (RAA) gives customers a real-time view of their environment and provides actionable alerts and remediations to the customer to help prioritize resources.

### RAA helps organizations by offering:

- Provides monthly or quarterly customized and detailed vulnerability and compliance assessment reports
- Simplifies security needs with easy to understand language for policy, remediation, regulations and standards compliance
- Offers automated, knowledge-based software that is updated when new threats appear on your network.
- Has the capability to carry out over 15,000 vulnerability assessments
- Helps IT administrators secure their networks faster and more effectively with ongoing monitoring
- Reduces the total cost of ownership by centralizing vulnerability scanning, patch management and network auditing
- Prevents downtime and business losses due to vulnerability exposure
- Offered as a third-party audit or can be performed with other managed services

### Features of Routine Assessment Appliance

- Live Assessor Review Monthly
- Meets all of the requirements as defined in the July 2006 FFIEC Examination Handbook for Self Assessments
- Comprehensive 12 point network assessment includes the following:
  - Installed software Inventory
  - Asset inventory
  - Password complexity assessment
  - Event Log and Policy Settings audit
  - Users and Groups Audit
  - Database audits
  - Patch and Service Pack Audits
  - Ports and Services enumeration and auditing
  - File and folder shared permissions audit
  - LSA secrets such as service passwords, cached password hashes of recent users, and others
  - Protected storage audits

**Today, there is no other solution on the market that is as comprehensive as what the RAA offers for testing for compliance and security in a single appliance. Contact us for more information.**
