Network Security Compliance Summary Report

InfoSight™, Inc. offers innovative and leading-edge information technology, managed security, and consulting services to optimize how an institutions' business-critical information is processed, managed and stored.

With an array of Managed IT services designed specifically for optimizing and securing networks, our team of security experts translate business challenges into solutions, enabling institutions to optimize network performance, monitor usage and comply with regulatory requirements - automatically enforcing policies 24/7.

Our Security and Managed IT Monitoring Solutions enable internal IT staff to focus on support of your day-to-day operations and not become distracted with policy enforcement, security management and administrative tasks. Our real-time security, email and Internet usage monitoring will insure end-user compliance with your policies. In addition, our easy to read graphical reports will display security violations, detailed unacceptable usage, and capture important log information. With InfoSight's services, you have the most comprehensive Managed Solution in the marketplace today. Select from the managed security solutions below that best suit your organization.

Managed Firewall

Management and monitoring of Firewall appliances and Virtual Private Network (VPN) connections are provided around the clock by highly trained security experts who quickly alert and respond to service outages, security threats and attacks. InfoSight's managed firewall services harness industry best practices to ensure a high-level of network access, availability, integrity, privacy and compliance.

Managed Intrusion Prevention Services

Intrusion Prevention Services (IPS) provide precise, real-time attack mitigation, granular forensic analysis, and excellent report capabilities for your institution. Our IPS solutions deliver in-depth defense for the enterprise in both Network and Host-based deployment. Our services enable identification, tracking and protection against potentially malicious network traffic targeted at your critical IT assets by performing protocol and behavioral analysis, content searching, matching and correlation. Ensuring the highest level of protection and compliance reporting requirements, InfoSight security experts will design and implement the right network-based and host-based IPS systems security system for your institution.

Network Management & Health Monitoring

InfoSight's Network Operations Center (NOC) remotely monitors, and proactively identifies, potential system failures before disruptions to critical operations occur. Whether using servers, network infrastructure devices, security appliances, IP telephony components or other critical systems, our NOC engineers can diagnose, and resolve critical network problems before these occur – 24x7x365.

Event Log Monitoring

InfoSight's Event Log Monitoring (ELM) enables federal industry compliance by providing log monitoring, management and reporting to mitigate risks, and immediate responses to security incidents. ELM identifies specific data from devices that use *Windows event logs*, *W3C*, and *Syslog* and applies essential rules and filtering. ELM provides real-time alerting when critical events arise and recommends corrective actions.

Patch Management Services

InfoSight's Patch Management Services facilitate a stable and secure networking environment by assisting IT organizations in applying frequent patches on all servers, workstations and network devices. Patch Management Services protect critical network infrastructure from vulnerabilities, provides excellent reporting capabilities, and integrates necessary patches into daily operations. InfoSight's security experts help institutions to define, develop and establish robust patch management processes into their security practice as a well-planned process to evaluate and implement patches into their ongoing security program.

Antivirus & Malware Protection

Our Antivirus and Malware Protection services provide complete protection against viruses, worms and Trojan horse programs. In addition, it also provides defense against SPAM, Spyware and Ad-ware. The easy-to-use interface and frequent automatic updates allows seamless protection. With quick scan times and efficient use of system resources, it will not slow down your email, network, or PCs.

Email Archival

Email Archival services provide a secure repository for storing, retrieving, and viewing all Exchange emails and attachments. The Exchange journaling feature ensures that all incoming, outgoing, and internal emails are archived and easily retrieved based on any search criteria. InfoSight helps your organization address email retention and can provide baseline e-mail archive compliance with the Sarbanes-Oxley Act of 2002.

Data Backup & Vaulting Services

InfoSight's state-of-the-art Data Vaulting Services are supported by expert systems & network administrators and is available 24/7. All data is encrypted and stored securely on InfoSight servers housed in a climate-controlled co-location facility with multi-layer security systems and 24-hour manned security. Backups are created to a Network Attached Storage without interruption to your institution. A full or partial system restoration can be performed in minutes.

Asset Tracking

A complete technology asset tracking solution is available 24X7 with our Managed Services. This solution provides discovery, snapshots, and dynamic reporting of your network's assets. Budgeting Network and Operating System upgrades are streamlined with simple detailed graphical or insurance reporting to help meet planning requirements for your institution.

Privacy Protection & Policy Enforcement Services:

Our Privacy and Policy Enforcement Services for email and Internet usage provide the best non-false positive filtering in the industry. Our compliance reporting transparently monitors all email and Internet usage for both violations and acceptable usage with detailed reports by end-user, department and category.

E-mail Policy management is a critical step in Information Security and Gramm-Leach-Bliley Act (GLBA) Compliance. InfoSight's managed services restrict and block non-compliant activity, and document and report employee usage of the institution's messaging system by knowing when content policies are violated and when sensitive data or unallowed attachments are transmitted.

Email Encryption

Today's technology has brought incredible convenience through the use of email, but thieves and hackers continually threaten the security of messages. To be truly compliant with privacy regulations your institution needs an extremely secure method of sending and receiving emails. In addition, your organization needs a seamless solution that does not require clients and business partners to run a specialized type of software on their PC's. InfoSight's Email Encryption solution is a true "one-to-many" solution that does not require special software and utilizes a standard browser. Our Email Encryption solution is affordable, scalable and reliable.

Email Privacy Protection

InfoSight's Email Privacy Protector is the only enterprise security system that transparently monitors and blocks the unauthorized distribution of confidential information. It forms a comprehensive network security framework for preventing deliberate and accidental information leaks. E-mail Privacy Protector protects your confidential information by continuously screening electronic communication channels for sensitive information, analyzing potential violations with sophisticated algorithms to reduce false positives, and enforcing configurable distribution policies to conform to compliance regulations and company standards. Email Privacy Protector is equipped with a detailed audit trail to prove that information has been properly disclosed.

Email Content Management

Protect your institution against legal liabilities, Malware threats, and provide proof of compliance with policies through our easy to read comprehensive reporting. Increase productivity in your institution by limiting what can be done with email. Our Email Content Management Service automatically enforces end-user compliance with written Email Usage Policies and minimizes risks by limiting access to the types of attachments received via email.

Internet Content Management

Protect your institution against legal liabilities, productivity losses, and increase available bandwidth by automatically enforcing user compliance with written Internet Usage Policies. Lower risk by limiting access to unauthorized or harmful sites, instant messaging, peer-to-peer programs, and recreational surfing with InfoSight's Internet Content Management & Reporting managed services.
