# 24x7 Managed Security Services

## Fully Outsource or Co-Manage Your Security Operations with Confidence

### Overview - The Challenge

The most daunting challenge for information security teams today is the requirement for threat monitoring and incident response 24x7x365 with internal resources that are available only 8x5. Additionally, limited IT staffing and tight cybersecurity budgets make holistic information security seem impossible. All too often, teams are asked to extend beyond basic security operations and are requested to actively threat hunt and research zero-day attacks. This can easily exhaust personnel and create unnecessary risk for most organizations.

InfoSight's Security Operations Center (SOC) leverages sound and repeatable processes to mitigate threats in a systematic approach delivering superior outcomes…

**We guarantee no alert fatigue EVER!**

- **Protecting companies operating within a datacenter, the Cloud or a hybrid model**
- **Using your toolsets, our toolsets or a combination**
- **Regardless of device or data source**

### Key Service Features

- **24x7 Device & Data Source Monitoring**
- **Threat Detection & Analysis**
- **Incident Response**
- **Mitigation & Remediation**
- **Notification & Alerting**
- **Reporting &Analytics**
- **Attack Intelligence**
- **Vulnerability Management**
- **Troubleshooting & Diagnostic Tools**

### How We Solve It

We tune your data sources, so that noise and false positives are thing of the past. All alert activity is tuned to just action alerts that are analyzed in a "single pane of glass" BY AN INFOSIGHT SOC ANALAYST in real-time.

**We never just pass along alert traffic based upon rules or application logic to your IT staff creating alert fatigue!**

Our "co-managed" approach provides security monitoring by becoming an extension of your IT team to monitor your most critical devices 24x7x365, while your team focuses on other assets. We offer a hosted SIEM in a layered security model where all assets can be viewed in a "single pane of glass" by both your IT team and ours at the same time.  Additionally, we offer 7PM to 7AM "off-peak" only monitoring to protect all your assets 24x7.

## Fully Outsource or Co-Manage Your Security Operations with Confidence

### A Deeper Dive into InfoSight's Services

**24x7 Device & Data Source Monitoring -** InfoSight's SNOC monitors all your assets in the Data Center and the Cloud regardless of data source 24x7x365.

**Threat Detection & Analysis -** 24x7 InfoSight SNOC Analysts monitor your assets and applications against attack by tuning out the noise and acting on validated events.

**Incident Response -** InfoSight's SNOC Analysts can take action on your behalf to stop attacks, contain incidents and minimize risk.

**Mitigation & Remediation -** We mitigate attacks and can harden systems to prevent incidents from recurring.

**Notification & Alerting -** Our SNOC analysts can immediately notify your team using a variety of methods around the clock providing recommendations for corrective actions.

**Reporting of Analytics -** Our comprehensive reporting and detailed analytics ensure compliance with ease.

**Attack Intelligence -** We leverage intelligence resources and threat vectors that are gathered from global sources.

**Vulnerability Management -** Scanning your network regularly to make sure no unnecessary or unknown vulnerabilities exist and ensure all patches are in place.

### Why InfoSight

- 24x7x365 US-Based SOC/NOC
- SOC 2 Certified
- Complete MSSP Services that include Monitoring, Real-Time Threat Analysis, Mitigation/Remediation, Alerting, Reporting and Device Management
- Flexible pricing models that can be 24x7, 8x5, of off-peak 7pm to 7am only coverage
- MSP & MSSP Solutions for both IT & OT ICS environments
- 22+ years Regulatory Compliance experience (GLBA, PCI, HIPAA, NERC, AWWA, etc.)

- Certified Experts (CISSP, CISA, CEH, OSCP, AWS, AWWA, etc.)
- Managed Services for On-premise Data center, Cloud and Hybrid environments
- Offering comprehensive cybersecurity Awareness Training Solutions
- Virtual ISO Programs that bridge the communication gap between IT and OT networks
